As someone who has only recently been exposed to the field of programming, the information presented by the team regarding quantum computing was extremely clear and concise, which made it very easy to follow. Even as an amateur in this field, the project has been quite insightful. The catarqt womanium project is truly a revolutionary innovation as it uses machine learning to detect the presence of cataracts. Tutorials were also provided by the team that help explain the basics of quantum computing. These tutorials helped me better understand the concepts behind the project. This project has further piqued my interest in the field of quantum computing. I hope to learn more, not only about this project, but also about quantum computing. The team had done an excellent job in executing this presentation and am looking forward to learning more about this area of study as well as the project.
